

# Environmental Health & Safety Academy XXIV

March 29, 2021 - April 30, 2021 | Virtual Classroom

The **Environmental Health & Safety Academy** is a unique course designed to provide the skills needed to identify, evaluate, and control workplace hazards, particularly those found in academic and research settings. This is the twenty fourth time the course has been offered, and the first virtual offering!

This course is helpful to anyone new to the health and safety field regardless of the industry, and is developed especially for health and safety professionals, particularly individuals charged with maintaining the health and safety of their faculty, staff, students, and visitors. Experienced health and safety professionals new to the academic or government sector will find this course incredibly helpful.

Due to the ongoing pandemic and public health recommendations, this course will be conducted online through the Canvas learning management system and Webex virtual meetings.

**2021 EH&S Academy XXIV is brought to you in collaboration by** Southwest Center for Environmental and Occupational Health; UTHHealth Safety, Health, Environment and Risk Management; University of California Riverside Risk and Safety Training Center
