

## In Response to COVID-19

Your organization likely has already taken measures to minimize risks related to the coronavirus COVID-19. That may include rethinking how—and if—your program will provide in-person training and other face-to-face events.

If you decide to deliver more learning opportunities online, you don't have to sacrifice the benefits offered by Learning Stream. Managing registrations and attendance for virtual meetings can work just the same as it does for in-person programs.

You may be one of many Learning Stream administrators already offering all or part of your education and training programs virtually. If not, several Learning Stream features are designed to ease the process of taking in-person offerings online:

- Include your virtual meeting login information in any Learning Stream-created email, from confirmations to reminders. The same information can also be included in event descriptions.
- Learning Stream offers direct integration with webinar/conferencing app GoToWebinar. Further, we will soon have a direct integration with another popular video conferencing app.
- Our [Learning Stream-to-Canvas](#) LMS integration means you can receive the same robust registration data, even when students sign up for online learning content housed in Canvas.
- Learning Stream APIs enable you to share data with other learning platforms, too.
- Learning Stream's own [Media Manager](#) module for video course delivery allows you to give learners direct access to instructional and other videos. They can register to gain access just like they would for a face-to-face class.
- Share files such as documents, pdfs, and PowerPoints. Attendees can access files associated with a learning event via their account.

If virtual training is a new adventure for you, or even if you are an old pro, [this brief article](#) offers tips on how to ensure a productive endeavor.

If you have any questions about any of the above, please contact your Learning Stream support representative.
